(54) Title: NETWORK POLICY MANAGEMENT AND EFFECTIVENESS SYSTEM

(57) Abstract

A method, apparatus, and article of manufacture for maintaining policy compliance on a computer network is provided. The method provides the steps of electronically monitoring network user compliance with a network security policy stored in a database, electronically evaluating network security policy compliance based on network user compliance, and electronically undertaking a network policy compliance action in response to network security policy compliance.

NETWORK POLICY MANAGEMENT AND EFFECTIVENESS SYSTEM

BACKGROUND

5 1. Field of the Invention.

This invention relates in general to networked computing systems, and more particularly, to a system for maintaining network security policy compliance.

10 2. Description of Related Art

The Internet and computer networks allow organizations to store applications and information on central servers, waiting to be called up and manipulated from any location. Networks allow people greater access to files and other confidential information. Global networks, including the Internet, and remote access increase the vulnerability of corporate data, increase the risk of information leaks, unauthorized document access and disclosure of confidential information, fraud, and privacy.

Employees are the greatest threat to an organization's information security. Employees with access to information resources including email, the Internet, and on-line networks significantly increase the security risks.

Employees are using email for personal purposes creating questions of appropriate use of company resources, workplace productivity and appropriateness of message content. One of the greatest sources of information leaks is employee sent email. With electronic communication and networks, an electronic paper trail is harder to determine, since no record of who accessed, altered, tampered with, reviewed, or copied a file can make it very difficult to determine a document's authenticity, and provide an audit and paper trail. In addition, there is no automated system to centrally collect, analyze, measure, index, organize, track, determine authorized and unauthorized file access and disclosure, link hard copy information with electronic files including email, and report on how information flows in and out of an organization.

30 Setting proper use and security policies are a method to create order and set standards for network use. Policies are ineffective unless users understand and

comply with the policies. Unfortunately, most organizations do not have tangible proof when, and if, a network-based policy violation has occurred until long after the damage has been done. Due to the technical nature of network policy violations, policy enforcement officers may not have adequate knowledge, skill, and evidence
5 to properly execute a policy violation claim. Cases of selective policy enforcement can occur if policy violations are not consistently reported, filed, investigated, and resolved.

Employees often view e-mail as equivalent to a private conversation. This view often does not reflect the official position of the organization. These
10 communications reflect preliminary thoughts or ideas that have not been reviewed by the organization and typically only reflect the personal opinion of the parties involved. Yet, since employees of the organization create these communications, courts and regulatory agencies have concluded that employee communications can reflect the organization's view. There is a further need for network communications
15 software programs that offers robust policy compliance assistance, policy effectiveness monitoring and reporting.

There is a need for an automated system to assist policy enforcement officers with proper policy enforcement procedure, and methods to measure policy effectiveness, appropriateness, user system activity and compliance.

20

SUMMARY OF THE INVENTION

To overcome the limitations in the prior art described above, and to overcome other limitations that will become apparent upon reading and understanding the present specification, the present invention discloses a method and
25 apparatus for maintaining policy compliance on a computer network. A system in accordance with the principles of the invention performs the steps of electronically monitoring network user compliance with a network security policy stored in a database, electronically evaluating network security policy compliance based on network user compliance, and electronically undertaking a network policy
30 compliance action in response to network security policy compliance. The network policy compliance actions may include electronically implementing a different

network security policy selected from network security policies stored in the database, generating policy effectiveness reports, and providing a retraining module to network users.

One preferred embodiment of the present invention includes notifying a
5 network user and a policy administrator, providing a retraining module to the network user, and restricting the network user's network access rights in response to monitoring network user compliance.

These and various other advantages and features of novelty which
characterize the invention and various preferred embodiments are pointed out with
10 particularity in the claims which are annexed hereto and which form a part hereof. However, for a better understanding of the invention, its advantages, and the objects obtained by its use, reference should be made to the drawings which form a further part hereof, and to accompanying descriptive matter, in which there is illustrated and described specific examples of apparatus in accordance with preferred embodiments
15 of the invention.

BRIEF DESCRIPTION OF THE DRAWINGS

Referring now to the drawings in which like reference numbers represent corresponding parts throughout:

20 FIG. 1 is a block diagram illustrating a policy effectiveness system according to an embodiment of this invention;

FIG. 2 is a block diagram illustrating the steps performed by the policy training module according to an embodiment of this invention;

25 FIGS. 3A-3C are block diagrams further illustrating the steps performed by a policy training module according to an embodiment of this invention;

FIG. 4 is a block diagram further illustrating the steps performed by a policy training module in administering a policy training exam;

FIG. 5 is a block diagram further illustrating the operation of a policy effectiveness system according to an embodiment of this invention;

30 FIG. 6 is a block diagram illustrating the steps performed by a policy compliance and reporting module according to an embodiment of this invention;

FIG. 7 is a block diagram further illustrating the steps performed by a policy compliance and reporting module according to an embodiment of this invention;

FIG. 8 is a block diagram illustrating the appeal process performed by a policy compliance and reporting module according to an embodiment of this

5 invention;

25 according to an embodiment of the invention;

Figure 34 is an exemplary screen display illustrating Software Compliance according to an embodiment of the invention;

Figure 35 is an exemplary screen display illustrating the audit function according to an embodiment of the invention;

30 Figure 36 is an exemplary screen display illustrating Network Non-Compliance Notice according to an embodiment of the invention;

Figure 37 is an exemplary screen display illustrating a Network Compliance Action Notice according to an embodiment of the invention;

Figure 38 is an exemplary screen display illustrating a policy compliance violation report according to an embodiment of the invention;

5 Figure 39 is an exemplary screen display illustrating a network policy action notice according to an embodiment of the invention;

Figure 40 is an exemplary screen display illustrating a policy knowledge query according to an embodiment of the invention;

10 Figure 41 is an exemplary screen display illustrating a policy compliance violation report according to an embodiment of the invention;

Figure 42 is an exemplary screen display illustrating a policy compliance violation code and report according to an embodiment of the invention;

Figure 43 is an exemplary screen display illustrating a System Violation Notice Email and Snail Mail Notice according to an embodiment of the invention;

15 Figure 44 is an exemplary screen display illustrating a Subsequent Action Report according to an embodiment of the invention;

Figure 45 is an exemplary screen display illustrating The Appeal Process according to an embodiment of the invention;

20 Figure 46 is an exemplary screen display illustrating policy effectiveness reports according to an embodiment of the invention;

Figure 47 is an exemplary screen display illustrating policy effectiveness reports according to an embodiment of the invention;

Figure 48 is an exemplary screen display illustrating a policy effectiveness action according to an embodiment of the invention; and

25 Figure 49 is an exemplary screen display illustrating policy resources according to an embodiment of the invention.

DETAILED DESCRIPTION OF THE INVENTION

30 In the following description of the exemplary embodiments, reference is made to the accompanying drawings that form a part hereof, and in which is shown by way of illustration a specific embodiment in which the invention may be

practiced. It is to be understood that other embodiments may be utilized and that structural changes may be made without departing from the scope of the present invention.

The present invention provides a method and apparatus for maintaining
5 policy compliance on a computer network.

FIG. 1 is a block diagram illustrating policy effectiveness system 100 according to an embodiment of this invention. The hardware generally implementing the policy effectiveness system 100 may include computers having processors and memories distributed over a network as is well-known in the art. The
10 memory may include RAM or fixed storage. The program steps implementing this invention are stored in the memory and executed by the computer processor. The present invention is may be implemented using an intranet based application that can be stored on central servers, waiting to be called up and manipulated via a Web browser from any location. Those skilled in the art will recognize that a variety of
15 configurations can be used without departing from the scope of the present invention and that a wide variety of distributed and multi-processing systems may be used. Each of the blocks of FIG. 1 will be introduced, followed by a detailed explanation of each block.

Block 105 represents a policy training module for developing network
20 security policies.

Block 110 represents a policy compliance monitor for monitoring compliance across the network.

Block 115 represents a policy compliance and reporting module for managing information received from the compliance monitor.

25 Block 120 represents the policy effectiveness module for managing the policy training module 105 and compliance monitor 110.

Block 130 represents the database for storing policy and compliance information for the policy effectiveness system 100.

Block 135 represents the document management system of the compliance
30 monitor 130.

Block 140 represents the email compliance system of the compliance monitor 130.

Block 145 represents the policy resource module for storing and managing policy resources.

5 Block 150 represents the user profile module for storing user information.

POLICY TRAINING MODULE 105

The policy training module 105 typically is an interactive, multimedia, policy awareness training program which helps employees gain a better
10 understanding of the basic concepts of network security, email and Internet technologies.

The policy training module 105 presents the network user with a suggested network policy the organization wishes to implement. Policy training module 105 is designed to help the user understand potential risks that an organization faces if a
15 policy is not implemented, the potential advantages and disadvantages of the policy in question, and the management and ethical principles affecting the potential policy in question. The network policies are generated by guidelines created from employee feedback obtained during a training session.

The policy training module 105 is comprised of several templates. When the
20 system is first implemented, policy consultants work with management personnel within an organization to determine the organization's policies for the initial training sessions, which may relate to, for example, an entire enterprise or a specific department of an enterprise. The initial policies are entered into a policy training database 130 and are the foundation for the initial training programs. As is further
25 described below, after the initial policy training session, the policy effectiveness system 100 will analyze all of the information gathered from the areas it monitors and compare it to each network user profile 150 to determine the policy training needs of individual network users. Then, the system customizes the policy training materials for the user training sessions.

30 To access policy training materials, the user is prompted to enter a password and hardware token. The user may be shown a hypertext list of policy training

options. The training options may be, for example, to enter a policy training session, review for a policy exam, or take a policy exam.

Policy Training Session

5 The policy training session may combine interactive multimedia, group policy development discussions, and policy exercises with individual policy review and feedback screens. The result is typically employee generated policy guidelines for network security policies.

10 In the preferred embodiment, the computer screen for the policy training session is divided into three frames. The divided screen gives the user the option to review and answer policy recommendation questions, see and participate in group policy discussions, and pause the interactive group policy discussion session. After pausing the interactive group policy discussion section, the user may review dynamic policy recommendations and statistics from previous policy sessions,
15 request additional information on a topic or subject presented during the previous policy session, or seek technical and product support.

 The policy training module 105 collects and records both individual and group policy recommendations. The policy training module 105 uses the user's policy recommendations as a benchmark for other users to use during policy
20 creation/training sessions, and to track policy training effectiveness.

 FIG. 2 is a block diagram illustrating the steps performed by the policy training module according to an embodiment of this invention.

 Block 200 represents the beginning of the policy training process. Figure 10 is an exemplary screen display illustrating the opening screen for policy training
25 according to an embodiment of the invention. The user may be asked to read a licensing agreement and indicate if he accepts or declines the terms of the agreement by clicking on the appropriate icon. Figure 11 is an exemplary screen display illustrating the terms of the software licensing agreement according to an embodiment of the invention. Figure 12 is an exemplary screen display illustrating
30 the terms of the continuation of the software licensing agreement according to an embodiment of the invention. A message stating the privacy rights of the user

typically remains on the screen until the user clicks on an accept or decline icon.

Figures 13 and 14 are exemplary screen displays illustrating the terms of the privacy agreement according to an embodiment of the invention.

Block 202 represents the policy training module 105 presenting the network
5 user with screen personality options. A screen personality represents a person who is executing the training session under an assumed screen name and identity. In other words, a screen relates to a real person taking a training session. The user is typically presented with a screen and is asked to choose a screen name and identity (e.g., Avatar) from a list of screen personalities for the training session. Such screen
10 personalities give users greater privacy and the freedom to answer policy questions without fear of retaliation from other employees participating in the program. Figure 15 is an exemplary screen display illustrating the choosing a screen identity according to an embodiment of the invention.

Block 204 represents the policy training module 105 recording the network
15 user's screen personality in the policy effectiveness database.

Block 204 represents the policy training module 105 assigning the user a session number. Figure 16 is an exemplary screen display illustrating assigning the user a session number according to an embodiment of the invention.

Block 206 represents the policy training module 105 recording the network
20 user's session number. The session number may be used to track and reference the training session in the policy effectiveness module.

Block 208 represents the policy training module 105 presenting the network user with a virtual training room. The user may be prompted to click on an icon to enter the virtual training room. The virtual training room is typically similar to an
25 Internet chat room.

Block 208 represents the policy training module 105 presenting a virtual facilitator. In a preferred embodiment, the user is introduced to the program's virtual facilitator who introduces the training participants to each other, explains the training rules, and assures the training program remains on schedule. The virtual
30 facilitator is typically stored in the policy training database 130. Figure 17 is an

exemplary screen display illustrating the introduction to the facilitator according to an embodiment of the invention.

In the preferred embodiment, a maximum of 5 screen personalities can participate per training session. Block 212 is a decision block representing the policy training module 105 determining if there are less than three participants registered for a session. If so, block 220 represents the policy training module 105 determining the number of virtual personalities needed for the system; otherwise, control is passed to decision block 214. The system monitors the number of screen personalities registered for a training session. The system records each user's training session including the user's policy suggestions, individual feedback and onscreen comments provided during the training session. Block 222 the system generates a virtual personality to participate in the training session. A virtual personality may be implemented in the form of a template having fields including information copied from a user's previous training session. When the policy training module 105 determines that a virtual personality is needed for a training session, the present system may be implemented so that the module 105 launches an algorithm to generate a virtual personality to participate in the training session. The algorithm copies information from the policy recommendation database 224 stored in database 130. Block 226 represents the policy training module 105 storing the virtual personality in the database 224. The policy recommendation database 224 is comprised of policy information previously submitted by a screen personality including policy suggestions, individual feedback and onscreen comments provided during previous training sessions. Virtual personality information obtained during previous training session is retrieved from the policy recommendation database 224. The algorithm copies the policy information from the previous policy modules, positions and scripts the policy information for the present training session. Script is defined as positioning and pacing the policy information per policy module to make it appear as though it is occurring in real-time. This provides the user with a virtual personality and an interactive, simulated real-time training experience without the user being dependent upon the availability of others for interaction, discussions and training. After introductions, the user is typically prompted to click on either an

agree or decline icon to indicate his understanding of the training rules and to indicate his readiness to proceed. Block 220 represents the policy training module 105 generating a policy.

Block 214 is a decision block representing the policy training module 105 determining if there are less than five screen personalities registered for the session. If so, block 216 represents the policy training module 105 dividing the participants into two sessions; otherwise, control is passed to block 220 which represents the policy training module 105 generating a policy. Block 216 represents the policy training module 105 assigning the participants a new session number.

10

The policy training process:

FIGS. 3A-3C are block diagrams further illustrating the steps performed by the policy training module 105 in performing the generating a network security policy step represented by block 220 according to an embodiment of this invention;

Block 300 represents the policy training module 105 indicating that the network user is ready to begin policy training by presenting the network users with suggested policy information.

Block 302 represents the policy training module 105 receiving suggested policies from the network users. Figure 18 is an exemplary screen display illustrating the suggested policy according to an embodiment of the invention. The suggested policy information typically is stored in a policy training database 130. The user is asked to review the policy information and a policy suggestion for a limited period of time. The policy training module 105 collects a policy suggestion from each network user's policy review session.

Block 304 represents the policy training module 105 recording all individual policy recommendations.

Block 306 represents the policy training module 105 prompting the network user to join a group discussion after the network user has reviewed the information on his own. The network user indicates his readiness to join the group discussion, such as by clicking an icon. The network user's signal may be sent to the other

participants' screens. Figure 19 is an exemplary screen display illustrating the network user discussion options according to an embodiment of the invention.

Block 308 represents the policy training module 105 notifying the other participants that a network user is prepared to enter the group session. Once the
5 individual network users are ready to discuss the policy, the facilitator begins the session monologue and monitors the session's content and time.

Block 310 represents the policy training module 105 retrieving the electronic facilitator from the database 120. The electronic facilitator serves as a moderator for the training module. For example, the electronic facilitator prompts the users for
10 input and monitors the time spent on each issue.

Block 312 represents the policy training module 105 connecting individual network users to the policy training chat room.

Blocks 314, 316 and 318 represent the individual network user computers connected to the policy chat room of the policy training module 105. One or more
15 individual network user's policy recommendations may be displayed to the group.

Block 322 represents the policy training module 105 displaying network user policy recommendation to the group. The policy recommendations may be shown in a different color and font. Figure 20 is an exemplary screen display illustrating group policy discussions according to an embodiment of the invention. The individual
20 recommendations are used to develop a group policy consensus.

From the discussion, the group confers, online, to write a policy recommendation. All group participants can view the policy recommendations and group discussions from previous policy training sessions. Figure 21 is an exemplary screen display illustrating policy writing according to an embodiment of the
25 invention.

Block 324 is a decision block representing the policy training module 105 querying the user regarding whether he wants more policy information. If so, block 326 represents the policy training module 105 retrieving the policy training information and displaying it to applicable network users; otherwise block 328
30 represents the policy training module 105 collecting policy recommendations from the group. The group confers, online, to write a policy recommendation. The policy

training module 105 collects and records all group policy recommendations. Figure 22 is an exemplary screen display illustrating the network user discussion options according to an embodiment of the invention.

Block 330 represents the policy training module 105 recording the group
5 policy recommendations in the policy recommendation database 224.

Block 332 represents the policy training module 105 calculating and ranking the group responses in the policy training database. For example, the policy with the most user votes may be the policy of group consensus.

Block 334 is a decision block representing the policy training module 105
10 determining if a policy consensus has been achieved. If so, then block 336 represents the policy training module 105 displaying the group consensus; otherwise, control typically is returned to block 322. If there is a tie for group consensus, the system requires network users to review the policy options and re-vote. Each user's policy information is displayed the group reconsiders their
15 recommendations and attempts to come to a group policy consensus.

The process illustrated in blocks 322 through 334 is repeated until a group policy consensus is achieved.

Block 336 represents the policy training module 105 displaying policy consensus. Figure 23 is an exemplary screen display illustrating the policy consensus
20 according to an embodiment of the invention.

Block 338 represents the policy training module 105 recording the policy consensus. The process of developing a consensus policy is repeated until all of the policy modules have been reviewed and addressed.

Block 340 is a decision block representing the policy training module 105
25 determining if there are no additional policy modules to complete.

If so, block 300 represents a repeat of the policy generation process; otherwise, block 342 represents the policy training module 105 presenting a suggested policy to the network user and assembling and recording the group consensus policies from each policy module.

The policy training module 105 assembles and records the group consensus policies from each policy module in the network security policy database 130.

Block 344 represents the end of the policy generation process of the policy training module 105

- 5 When the training session is completed, the network user is given the options to start the policy exam, review policy training materials, or end the session. Figure 24 is an exemplary screen display illustrating the policy training options according to an embodiment of the invention.

10 Start the policy exam

FIG. 4 is a block diagram further illustrating the steps performed by the policy training module in administering a policy training exam according to an embodiment of the present invention. The network user is given an online policy exam to reinforce the information presented in the policy training session.

- 15 Block 400 represents the policy training module 105 receiving a request for a policy training exam from the network user.

- Block 402 represents the policy training module 105 retrieving a policy exam from the policy training database 130 and presenting it to the network user. Figure 25 is an exemplary screen display illustrating the policy exam according to an
20 embodiment of the invention. Once the network user completes the exam, he is prompted to send the exam to policy effectiveness 120 where the information regarding the user's taking of the exam is recorded.

- Block 404 represents the policy training module 105 receiving the exam answers from the network user and tabulating the network user's score. During the
25 exam tabulation period, the network user is asked to fill out a policy training feedback and evaluation form.

- Block 406 represents the policy training module 105 retrieving a policy training feedback and evaluation form from the policy training database 130 and sending it to the network user. Figure 26 is an exemplary screen display illustrating
30 a training feedback and evaluation form according to an embodiment of the

invention. The network user completes the policy training feedback and evaluation form and returns it to the policy training module 105.

Block 408 represents the policy training module 105 storing the policy training feedback and evaluation form in the User's Profile database 150.

5 Block 410 represents the policy training module 105 sending the network user his exam score after the feedback and evaluation form is completed.

After the employee completes the policy building session, the policy training module 105 may request that the user sign an Appropriate Use Agreement/Employee Agreement designed to limit the organization's liability. Figure 27 is an exemplary
10 screen display illustrating an Appropriate Use Agreement/Employee Agreement form according to an embodiment of the invention. Figure 28 is an exemplary screen display illustrating an Appropriate Use Agreement/Employee Agreement form according to an embodiment of the invention. Block 412 represents the policy training module 105 sending the network user an Appropriate Use
15 Agreement/Employee Agreement. The user reads and signs the Agreement. The user returns the Agreement to the policy training module 105. The signed Agreement is kept in the User Profile database 200 and a copy is emailed to the user for his records.

Block 414 represents the policy training module 105 receiving the Agreement
20 and storing it in the User Profile 150.

Block 416 represents the policy training module 105 sending an email message to the network user with a copy of the Agreement attached.

Block 418 represents the end of the policy exam process. Figure 29 is an exemplary screen display illustrating the end of the training according to an
25 embodiment of the invention. If the user fails the exam, the policy training module 105 will ask him if he wants to retake the exam, review policy training materials, or end the session.

POLICY COMPLIANCE MONITOR 110

30 The Policy Compliance Monitor 110 works with the Policy Effectiveness Module 120 to provide network user compliance monitoring with network security

policy stored in a database, it electronically evaluates network security policy compliance based on network user compliance, and undertakes a network policy compliance action in response to network security policy compliance. Network user compliance monitoring is defined as monitoring network activity to insure users are
5 in compliance with the organization's network security policies. Network security policy is a set of rules designed to limit an organization's risk and liability.

FIG. 5 is a block diagram further illustrating the operation of the policy effectiveness system according to an embodiment of this invention.

The policy compliance monitor oversees user profile, email compliance,
10 internet compliance, document management and software compliance functions to collect network user security policy compliance activities. Figure 30 is an exemplary screen display illustrating the policy compliance and reporting according to an embodiment of the invention.

Block 110 represents the policy compliance monitor of the policy
15 effectiveness system 100.

Block 150 represents the user profile module of the policy effectiveness system 100. The user profile module 150 is a database comprised of information about network users. For example, the user profile module 150 may contain information about network user policy compliance history, employment history, and
20 network identification information. Figure 31 is an exemplary screen display illustrating the User Profile according to an embodiment of the invention.

Block 140 represents the email compliance module of the policy effectiveness system 100. The email compliance module 140 collects information on network users' email use activity. Figure 32 is an exemplary screen display
25 illustrating email compliance according to an embodiment of the invention.

Block 135 represents the document management module of the policy effectiveness system 100. Figure 33 is an exemplary screen display illustrating Document Management according to an embodiment of the invention. The document management module 135 collects information on documents in the
30 system. This may include document history, document authenticity, network user access to documents, and document access and disclosures.

Block 500 represents the software compliance module of the policy effectiveness system 100. The software compliance module 500 collects information on how network users utilize software on the network. Figure 34 is an exemplary screen display illustrating Software Compliance according to an embodiment of the invention.

Block 502 represents the audit function of the policy effectiveness system 100. The audit function collects information from all of the policies monitored by the policy compliance monitor 110. Each monitored policy is assigned a value representing a target baseline compliance level for network policy compliance ("network policy compliance"). In the preferred embodiment, the numeric value assigned to each monitored policy is 95, representing that for each policy 95% user compliance is required. Each network user compliance activity has a numeric value the system monitors representing a target baseline compliance level for user policy compliance ("user policy compliance").

Block 504 represents the network security policy compliance database of the database 130. The baseline compliance level assigned to each monitored policy is stored in the network security policy compliance database 504 of the database 130. The audit function is responsible for reviewing network user compliance and network security policy.

Figure 35 is an exemplary screen display illustrating the audit function according to an embodiment of the invention. Block 506 represents the network security policy database. The network compliance value is monitored in relation to the user compliance value stored in the network security policy database 506.

Block 508 is a decision block representing the policy effectiveness system 100 analyzing the network policy compliance value in relation to the user compliance policy value. If the user policy compliance value is greater than or equal to the network policy compliance value, then block 120 represents the policy effectiveness system notifying the policy effectiveness module 120 that the network is in compliance. Otherwise, if the network policy compliance value is greater than the user policy compliance value, the policy compliance monitor 110 measures the difference between the network policy compliance value and the user policy

compliance value and undertakes a network compliance action in response to that difference. Alternatively, the policy compliance monitor could undertake a network compliance action anytime a policy violation occurred.

Figure 36 is an exemplary screen display illustrating Network Non-

5 Compliance Notice according to an embodiment of the invention. Each policy is associated with a corresponding group of network policy compliance actions ranging from a mild (e.g., notifying a network user), level two (e.g. notifying the network user and a policy administrator), level three (e.g., providing a retraining module to a network user, restricting a network user's network access rights) and a level four
10 action (e.g., restricting the network user's network access rights.) Each compliance action in the group is assigned a value related to a numeric value that may be reported from monitoring network user compliance. The numeric value assigned is based on the severity of the network policy compliance violation, i.e. the difference between the network policy compliance value and the user policy compliance value.

15 Upon recording the difference between the network policy compliance value and the user policy compliance value, the policy compliance and reporting module 115 records this information in the network security policy database 506 and begins undertaking the appropriate network compliance action.

For example, an organization may have a personal email use policy. The
20 personal email use policy may limit each user to sending a maximum of 20 personal email messages per day. The system assigns the numeric value of 95 to the personal email messages policy. A value of 100 is the optimum network policy compliance value. The compliance monitor collects information on network user compliance for personal email use. If an individual sends 25 email messages, the system records a
25 user policy compliance value of 90. The user policy compliance value of 90 is compared to the network policy compliance value of 100. The difference of 5 (95-90) indicates to the policy effectiveness system 100 that a network policy compliance action may be taken. In this example, a network user compliance value of 5 may tell the system to execute a network compliance action.

30 In the preferred embodiment, the system has four action levels. Each action level may be undertaken in response to a range of differences in compliance values.

Figure 37 is an exemplary screen display illustrating a Network Compliance Action Notice according to an embodiment of the invention.

At a first action level, the system may send an email notifying the network user to cease and desist the non-compliant activity.

- 5 At a second action level, the system may prompt the system administrator to follow screen prompts to initiate procedures for the infraction. The policy effectiveness system 100 notifies the network user and a system administrator. Email and surface mail are automatically sent to the alleged violator and the system administrator. The message may ask the alleged violator to discontinue the
- 10 inappropriate behavior or to reread the Intranet-base Policy Manual. The policy effectiveness system 100 records if the user visits the electronic site of the Policy Manual.

- At a third action level, the policy effectiveness system 100 may file a policy violation report and launch an investigation. The policy effectiveness system 100
- 15 sends email and surface mail to the alleged violator and the system administrator informing them of the violation. A policy retraining module may be the most likely course of action. At the third action level, the actions of the second infraction are initiated and additionally an immediate referral is made to the appropriate policy officer for review and action.

- 20 At the fourth action level, the policy effectiveness system 100 may restrict the network user's network access rights and prompt the system administrator to either begin investigation procedures and/or initiate a signal to the policy knowledge base to determine the recommended course of action.

- Block 510 represents the policy effectiveness system 100 undertaking a
- 25 network policy compliance action. The policy effectiveness system 100 sends a signal to policy compliance and reporting 115 to record the non-compliant network user activity.

POLICY COMPLIANCE AND REPORTING 115

- 30 The policy compliance and reporting module 115 provides automated policy monitoring, policy violation procedures and reporting, it tracks policy investigations

and generates policy investigation reports. These procedures work in conjunction with existing policy compliance reporting, discipline and grievance procedures to uphold the organization's technology policies.

5 Compliance

The policy compliance and reporting 115 monitors and records user and network system activities audit procedures and reporting, policy violation procedures/investigations/reporting, compliance/non-compliance status reporting.

10 FIG. 6 is a block diagram illustrating the steps performed by a policy compliance and reporting module according to an embodiment of this invention.

The policy compliance and reporting process begins when the policy compliance and reporting 115 receives a signal from the compliance monitor 110 that a network compliance action has been taken. Block 510 represents that a network compliance action has been taken by the policy effectiveness system 100.

15 Block 600 represents the policy compliance and reporting 115 sending an email or pager message to the system administrator notifying the administrator that a network user compliance violation has occurred. The email message attaches a policy compliance violation report (file) to the email and instructs the system administrator to follow the compliance reporting procedures. Figure 38 is an
20 exemplary screen display illustrating a policy compliance violation report according to an embodiment of the invention. The email instructs the system administrator to log into the system, present a password and hardware token to access the policy violation reporting procedures and indicates the screen option to choose. The screen options available to the system administrator may include: file a policy compliance
25 violation report, investigate a policy compliance violation report, review audit and system reports, the appeal process, review a user profile, policy resources, and policy effectiveness reports.

File a policy violation report

30 In a preferred embodiment, a screen is displayed to the system administrator indicating a network user policy compliance violation has occurred and a network

user compliance action, level two or greater, has been taken. The system administrator is instructed to click on an icon to access the network user policy compliance violation information and document the violation. Figure 39 is an exemplary screen display illustrating a network policy action notice according to an embodiment of the invention.

Block 503 represents the policy compliance and reporting 115 retrieving the network user policy compliance violation documentation from the policy effectiveness module 120. Policy compliance and reporting 115 advises the system administrator on how to execute the designated network user compliance violation reporting procedures. This is achieved by prompting the system administrator through the reporting process and presenting a policy knowledge base. Figure 40 is an exemplary screen display illustrating a policy knowledge query according to an embodiment of the invention. A support icon is also available if the user needs to discuss a specific procedure with a Policy Consultant.

Block 604 represents the policy knowledge database of the policy compliance and reporting 115. The policy knowledge database is comprised of automated network user policy compliance violation documentation. This may include network policy violation report forms, detailed reporting instructions, and investigation procedures checklist. The policy compliance and reporting 115 analyzes the network user policy compliance violation information from the policy knowledge database 604 and determines if an investigation action is needed.

After the system analyzed the violation information, a policy violation investigation report form is displayed on the user screen. Figure 41 is an exemplary screen display illustrating a policy compliance violation report according to an embodiment of the invention. All reports are documented in read-only format and all modifications and changes to the non-compliance reports are an addendum to the initial report. The system administrator is asked to supply the following network compliance violation information regarding the claim including the network user's name: E-mail address, title, department, mail station, type of violation (non-compliance drop down box), date of occurrence, date of report, and official report of the incident (MIS, the user, or policy officer).

copy printed and sent to the network user. The surface mail and e-mail reports are form letters that may include an Internet address to help inform the network user about the policy compliance violation reporting process. Policy compliance and reporting 115 tracks and monitors the status of the complaint by monitoring the scheduling module and tracking where the report is in the system. Block 612 represents the policy compliance and reporting 115 distributing the policy compliance violation report information.

Printed copies of the policy compliance violation report, correspondence, and related documents have a watermark printed in the header of the print out of the policy compliance violation report with the words "corporate record" printed on the top corner of the document. The printout may include the date the document was created, who created the document, the version number of the report and the file path. This is used to insure the authenticity of the policy compliance violation report.

15

Subsequent Action Report

FIG. 7 is a block diagram further illustrating the steps performed by the policy compliance and reporting module 115 according to an embodiment of this invention in generating a subsequent action report. Figure 44 is an exemplary screen display illustrating a Subsequent Action Report according to an embodiment of the invention. Block 700 represents the policy compliance and reporting module 115 receiving a message from the schedule module to begin subsequent action procedures. The policy officer, the system administrator and the network user are automatically reminded via e-mail of the requirement to individually file subsequent meeting reports with the system. Block 702 represents the policy compliance and reporting module 115 distributing notices via email. The policy officer, system administrator and the network user are required to present login and password/token information to file subsequent action reports with the system and to verify a policy compliance violation meeting occurred.

The network user is also asked to sign an agreement indicating he attended the policy enforcement meeting and reviewed the policies of the organization. The

system administrator and policy officer are asked to confirm and document that the meeting took place. All parties are complete the forms. Block 704 represents the policy compliance and reporting module 115 retrieving subsequent action reports from the parties. The system stores the documents in the policy effectiveness database.

The system administrator is prompted by the system to confirm in the subsequent action report form. The subsequent action form indicates if the network user policy compliance violation claim is still under investigation, pending or is closed.

Block 706 represents the policy compliance and reporting module 115 storing information related to the subsequent action reports. The policy compliance and reporting module 115 monitors the status of all network user compliance violations to insure that violation reports are properly reported and managed.

15 The Appeal Process

FIG. 8 is a block diagram illustrating the appeal process performed by a policy compliance and reporting module according to an embodiment of this invention. Figure 45 is an exemplary screen display illustrating The Appeal Process according to an embodiment of the invention. After filing the subsequent action report, the system gives the network user the opportunity to respond to appeal the network compliance violation. Block 800 represents the policy compliance and reporting module 115 prompting network user with the appeal option. Block 802 represents the policy compliance and reporting module 115 receiving a signal to begin appeal process. The network user is given the option of choosing an appeal facilitator from the organization. Appeal facilitators are employees of the organization randomly chosen by the system to act a facilitator for the appeal process. The policy compliance and reporting module 115 reviews network user profiles and chooses the network users with the lowest network user policy compliance violation records to be facilitator candidates. Block 804 represents the policy compliance and reporting module 115 retrieving appeal facilitator information from the policy compliance and reporting database. The user chooses

the facilitator from the Appeal screen. The system records the process and automatically sends an email to the facilitator. Block 806 represents the policy compliance and reporting module 115 recording the facilitator. Block 808 represents the policy compliance and reporting module 115 assigning a password to the facilitator. Block 810 represents the policy compliance and reporting module 115 sending an email to the facilitator. The e-mail explains the appeals process to the facilitator and provides the facilitator with the passwords needed to access to the network user policy compliance violator's file. The facilitator has read-only access to the network user compliance violation reports. The facilitator is automatically copied on all appeal process communications. The system records this activity and stores it in the policy effectiveness database.

Next, the internal officers are automatically prompted and sent a notice to schedule the appeal meeting with the new facilitator, the network user, the system administrator and the policy officer. Block 812 represents the policy compliance and reporting module 115 prompting users to schedule an appeal meeting. The process is reported to, stored, and tracked in the policy effectiveness module. Block 814 represents the policy compliance and reporting module 115 the system recording the process. The appeal report is automatically sent to internal policy officers. The network user is automatically sent information to inform him of his procedural rights. The appeal report is automatically sent to the policy effectiveness module, the policy officer and the network user, and a surface mail is sent to the policy officer and the violator. Block 816 represents the policy compliance and reporting module 115 distributing appeal information to all parties.

The facilitator logs into the system and reviews all of the documents regarding the policy violation. The facilitator, the policy officer and the suspected violator meet to listen to the violator's appeal. The facilitator and the policy officer are required to present login and password/token information to file appeal reports and to verify an appeal meeting occurred. Block 818 represents the policy compliance and reporting module 115 retrieving appeal report forms from policy compliance and reporting database. The appeal reports are comprised of several fields. The facilitator and the policy officer are required to complete the online

reports. The policy effectiveness analyzes the appeal reports to determine the final decision. Block 820 represents the policy compliance and reporting module 115 analyzing the appeal reports. An email is sent to all parties with the final decision file attached. Block 822 represents the policy compliance and reporting module 115 distributing the final appeal decision. Block 824 represents the policy compliance and reporting module 115 transferring the appeal information to the policy effectiveness module 120.

POLICY EFFECTIVENESS 120

10 The policy effectiveness module 120 electronically collects, records, analyzes and stores information from policy compliance monitoring, analyzes policy compliance and reporting, evaluates network policy compliance actions undertaken in response to the network security policy violations and electronically implements a different network security policy selected from network security policies stored in a
15 policy database.

 The policy effectiveness module 120 analyzes information collected from the policy compliance and reporting 115 to determine if network user compliance policies are effective. Figure 46 is an exemplary screen display illustrating policy effectiveness reports according to an embodiment of the invention. Figure 47 is an
20 exemplary screen display illustrating policy effectiveness reports according to an embodiment of the invention. If a policy is determined to be ineffective, a new policy may need to be implemented.

 The policy effectiveness module 120 monitors the policy compliance actions taken over a period of time. At the time the system is implemented, the system
25 administrator may set the system to measure network compliance actions that have been undertaken on a monthly, quarterly, annual, historic (e.g., year-to-date) basis. After the monitoring time period has been recorded in the system, the system administrator may record the number of network policy compliance actions, per network compliance policy, considered acceptable during a said period of time.

30 The policy effectiveness module 120 analyzes the policy compliance actions stored in the policy compliance and reporting module 115. Each policy is assigned a

value representing a target baseline compliance level for network policy compliance ("network policy compliance"). In the preferred embodiment, the numeric value assigned to each monitored policy is 95, representing that for each policy 95% user compliance is required. The level of user compliance for a group of network users with respect to a particular policy is monitored. The network user compliance activity for a group has a numeric value the system monitors representing the degree of group user policy compliance ("group user policy compliance"). The network compliance value is monitored in relation to the user compliance value stored in the network security policy database 506.

FIG. 9 is a block diagram further illustrating a policy effectiveness system according to an embodiment of this invention.

Block 900 represents the policy effectiveness module 120 determining network policy compliance. Block 910 represents the policy effectiveness module 120 determining group user compliance. Block 920 is a decision block representing the policy effectiveness module 120 analyzing the network policy compliance value in relation to the group user compliance policy value. If the group user policy compliance value is greater than or equal to the network policy compliance value, then block 940 represents the policy effectiveness module 120 recording that the network is in compliance with respect to a policy. Otherwise, if the network policy compliance value is greater than the group user policy compliance value, the policy effectiveness module 120 measures the difference between the network policy compliance value and the group user policy compliance value and may undertake a network compliance action in response to that difference.

Each compliance action in the group is assigned a value related to a numeric value that may be reported from monitoring network user compliance. The numeric value assigned is based on the severity of the network policy compliance violation, i.e. the difference between the network policy compliance value and the group user policy compliance value. Upon recording the difference between the network policy compliance value and the group user policy compliance value, the policy effectiveness module 120 records this information in the network security policy database 130 and begins undertaking the appropriate network compliance action.

The policy manual is presented to users such that they will be able to read and review the policy manual periodically. Users are periodically required to sign an online form indicating he or she has read the policies, and any policy revisions, and understands all of policies. Annual updated information will be highlighted for fast review. The policy effectiveness system 100 tracks users visit to the policy. The self-serve policy section allows the policy officer to revise the policy. The policy officer is prompted to access a policy database and is instructed to download a new policy when the system has determined that a policy is ineffective and users are consistently out of compliance with the current policy. The new policy(s) are automatically added to the policy effectiveness system and the organization's policy manual.

Software resources include software listings and updates, guidelines for proper use including email etiquette, and netiquette training, Internet information and personal safety training , optional registration of an encryption private or public key with the system, a listing of the organization's approved and licensed software, software downloading guidelines and approved procedures, tech support for user's questions

Registering newly downloaded software to the system, management approved trialware, shareware and others for review by the organization, operations and support information, regulation, policy, and Freedom of Information Act materials, information explaining how the system works including product support and services, telephony, text-based support, and in-house support options, a simple do & don't security module for non technical activity, and online safety information

25 Security, System Backup, and Recovery Processes

Users must present a password and hardware token to access the policy effectiveness system 100. Most organizations concentrate their security resources on securing the perimeter of their network. Unfortunately, the greatest threat to an organization is its employees, who, with network access can cause greater damage than an external intruder.

The policy effectiveness system 100 employs an electronic tag to monitor document level access, security and to track information on a per document basis. This creates the opportunity to prove document authenticity, to track the copies and revisions of a document, and to monitor and report document access and disclosures.

5

System backup and recovery

The policy effectiveness system 100 has an online backup feature. This feature offers full redundancy, without the expense of off-site storage, and limits the process of physically cataloging and indexing backup tapes. Cataloging and
10 indexing backups is automatically completed by the system. Backman is an existing software that does this.

Software Compliance

Most large organizations are not cognizant of the type of software licenses
15 they have, which workstation and/or server has which software, who is using what software, and whether or not the organization is in compliance with their software licensing agreements. Users can easily download freeware, shareware trialware, and permware software from the Internet. All software is distributed with compliance conditions or restrictions of its use, even if it is identified as freeware, shareware and
20 trialware, or is copyrighted but freely distributed.

To effectively monitor an organization's software compliance, periodic network audits are needed to identify deviations in the software inventory, and to reconcile software license agreements with software and hardware inventories. Products that monitor software licenses are known in the art, for example the FlexIM
25 software by Globetrotter.

Each user is registered in the user profile database 150. The user profile database 150 includes a user's hardware and software inventory information, as well as the user's name, user's email address, user's surface mail address, employment status (e.g., temp, contract, virtual), title, department, organizational chart indicating
30 who the user reports to, the direct reports, his assistant, and mail station address. It

also may indicate the software present on a user's workstation and the user's system access and security status.

The user profile database 150 also retain copies of any Employment Agreements and other employment-related contracts, maintains a record of the users' policy training and exam status, policy compliance history, network activity, and any special network access or privileges such as using the network for charitable use. Additionally, the user profiles 150 may also monitor software downloads from the network, or Internet, to hardware through network activity reports and network audits, including any software approved for use by management and other special approvals. Additional user information can be monitored and collected to assist the organization's reporting needs.

The policy effectiveness system 100 includes an object library/object level licensing system similar to FlexIM by Globretrotter.

The policy compliance monitor 110 features dynamic updating and exchanging of software licensing agreements. The compliance monitor 110 reviews all software license agreements and maintains records of the vendor information. The compliance monitor 110 sends a notification to the system administrator indicating that a software license is about to expire. The system administrator is prompted to send an email to the licensing organization to update the license agreement. Once the updated license agreement is received via email, the system automatically updates the software license registered and stored in the compliance monitor 110.

The policy effectiveness module 120 monitors and tracks network activity including all hardware and software in the policy effectiveness system 100. This module can generate reports to track an organization's user access including failed login attempts and all attempts to launch privileged applications, any changes to system configuration parameters software downloads from the Internet, software and hardware usage, location of software, location of software license agreements, type of software agreements, coordination of software license agreements with software utilization, statistical and graphical information regarding justification for software purchases, upgrades and maintenance expense, software installations, software

Licensing Agreement for Virtual Policy Builder

END-USER LICENSE AGREEMENT FOR VIRTUAL POLICY BUILDER SOFTWARE - VIRTUAL WORKSPACE. IMPORTANT- READ CAREFULLY: This End-User License Agreement ("EULA") is a legal agreement between you (either an individual or a single entity) and the manufacturer ("PC Manufacturer") of the computer system ("COMPUTER") with which you acquired the Virtual Workspace software product(s) identified above ("SOFTWARE PRODUCT" or "SOFTWARE"). If the SOFTWARE PRODUCT is not accompanied by a new computer system, you may not use or copy the SOFTWARE PRODUCT. The SOFTWARE PRODUCT includes computer software, the associated media, any printed materials, and any "online" or electronic documentation. By installing, copying or otherwise using the SOFTWARE PRODUCT, you agree to be bound by the terms of this EULA. If you do not agree to the terms of this EULA, PC Manufacturer and Virtual Workspace are unwilling to license the SOFTWARE PRODUCT to you. In such event, you may not use or copy the SOFTWARE PRODUCT, and you should promptly contact PC Manufacturer for instructions on return of the unused product(s) for a refund.

SOFTWARE PRODUCT LICENSE

The SOFTWARE PRODUCT is protected by copyright laws and international copyright treaties, as well as other intellectual property laws and treaties. The SOFTWARE PRODUCT is licensed, not sold.

1. GRANT OF LICENSE. This EULA grants you the following rights:

- * Software. You may install and use one copy of the SOFTWARE PRODUCT on the COMPUTER.
- * Network Services. If the SOFTWARE PRODUCT includes functionality that enables the COMPUTER to act as a network server, any number of computers or workstations may access or otherwise utilize the basic network services of that server. The basic network services are more fully described in the printed materials accompanying the SOFTWARE PRODUCT.
- * Storage/Network Use. You may also store or install a copy of the computer software portion of the SOFTWARE PRODUCT on the COMPUTER to allow your other computers to use the SOFTWARE PRODUCT over an internal network, and distribute the SOFTWARE PRODUCT to your other computers over an internal network. However, you must acquire and dedicate a license for the SOFTWARE PRODUCT for each computer on which the SOFTWARE PRODUCT is used or to which it is distributed. A license for the SOFTWARE PRODUCT may not be shared or used concurrently on different computers.
- * Operating System Choice. PC Manufacturer may have elected to provide you with a choice of Virtual Workspace operating system software for the COMPUTER.
- * OEM Back-up Utility. If PC Manufacturer has not included a back-up copy of the SOFTWARE PRODUCT with the COMPUTER, you may use the Virtual Workspace back-up utility, if included with the SOFTWARE PRODUCT, to make a single back-up copy of the SOFTWARE PRODUCT. You may use the back-up copy solely for archival purposes. After the single back-up copy is made, the backup utility will be permanently disabled.

2. DESCRIPTION OF OTHER RIGHTS AND LIMITATIONS.

- * Limitations on Reverse Engineering, Decompilation and Disassembly. You may not reverse engineer, decompile, or disassemble the SOFTWARE PRODUCT, except and only to the extent that such activity is expressly permitted by applicable law notwithstanding this limitation.
- * Separation of Components. The SOFTWARE PRODUCT is licensed as a single product. Its component parts may not be separated for use on more than one computer.
- * Single COMPUTER. The SOFTWARE PRODUCT is licensed with the COMPUTER as a single integrated product. The SOFTWARE PRODUCT may only be used with the COMPUTER.
- * Rental. You may not rent or lease the SOFTWARE PRODUCT.
- * Software Transfer. You may permanently transfer all of your rights under this EULA only as part of a sale or transfer of the COMPUTER, provided you retain no copies, you transfer all of the SOFTWARE PRODUCT (including all component parts, the media and printed materials, any upgrades, this EULA and, if applicable, the Certificate(s) of Authenticity), AND the recipient agrees to the terms of this EULA. If the SOFTWARE PRODUCT is an upgrade, any transfer must include all prior versions of the SOFTWARE PRODUCT.
- * Termination. Without prejudice to any other rights, Virtual Workspace may terminate this EULA if you fail to comply with the terms and conditions of this EULA. In such event, you must destroy all copies of the SOFTWARE PRODUCT and all of its component parts.

Fig. 12

Licensing Agreement for Virtual Policy Builder

Continue

3. **UPGRADES.** If the SOFTWARE PRODUCT is an upgrade from another product, whether from Virtual Workspace or another supplier, you may use or transfer the SOFTWARE PRODUCT only in conjunction with that upgraded product, unless you destroy the upgraded product. If the SOFTWARE PRODUCT is an upgrade of a Virtual Workspace product, you now may use that upgraded product only in accordance with this EULA. If the SOFTWARE PRODUCT is an upgrade of a component of a package of software programs which you licensed as a single product, the SOFTWARE PRODUCT may be used and transferred only as part of that single product package and may not be separated for use on more than one computer.

4. **OEM COPYRIGHT.** All title and copyrights in and to the SOFTWARE PRODUCT (including but not limited to any images, photographs, animations, video, audio, music, text and "applets," incorporated into the SOFTWARE PRODUCT), the accompanying printed materials, and any copies of the SOFTWARE PRODUCT, are owned by Virtual Workspace or its suppliers. The SOFTWARE PRODUCT is protected by copyright laws and international treaty provisions. You may not copy the printed materials accompanying the SOFTWARE PRODUCT.

5. **DUAL-MEDIA SOFTWARE.** You may receive the SOFTWARE PRODUCT in more than one medium. Regardless of the type or size of medium you receive, you may use only one medium that is appropriate for your single computer. You may not use or install the other medium on another computer. You may not loan, rent, lease, or otherwise transfer the other medium to another user, except as part of the permanent transfer (as provided above) of the SOFTWARE PRODUCT.

6. **OEM PRODUCT SUPPORT.** Product support for the SOFTWARE PRODUCT is NOT provided by Virtual Workspace Corporation or its subsidiaries. For product support, please refer to PC Manufacturer's support number provided in the documentation for the COMPUTER. Should you have any questions concerning this EULA, or if you desire to contact PC Manufacturer for any other reason, please refer to the address provided in the documentation the COMPUTER.

7. **OEM U.S. GOVERNMENT RESTRICTED RIGHTS.** The SOFTWARE PRODUCT and documentation are provided with RESTRICTED RIGHTS. Use, duplication, or disclosure by the Government is subject to restrictions as set forth in subparagraph (c)(1)(ii) of the Rights in Technical Data and Computer Software clause at DFARS 252.227-7013 or subparagraphs (c)(1) and (2) of the Commercial Computer Software-Restricted Rights at 48 CFR 52.227-19, as applicable. Manufacturer is Virtual Workspace Corporation/250 East 6th Street, Suite 610/St. Paul, MN 55101.

FOR THE LIMITED WARRANTIES AND SPECIAL PROVISIONS PERTAINING TO YOUR PARTICULAR JURISDICTION, PLEASE REFER TO YOUR WARRANTY BOOKLET INCLUDED WITH THIS PACKAGE OR PROVIDED WITH THE SOFTWARE PRODUCT PRINTED MATERIALS.

Please indicate your acceptance of the software licensing agreement by clicking on the accept icon. If you disagree with the terms of the agreement, click the decline icon.

**Privacy Statement
for
Virtual Policy Builder**

Virtual WorkSpace has created this privacy statement in order to demonstrate our firm commitment to privacy. The following discloses our information gathering and dissemination practices for this site; Virtual Policy Builder.

Your IP address is used to help identify you and your shopping cart.

Our site's registration form requires users to give us contact information (like their email address) and demographic information (like their zip code, age, or income level). The customer's contact information is used to contact the visitor when necessary. Users may opt-out of receiving future mailings; see the delete/deactivate section below. Demographic and profile data is also collected at our site. We use this data to tailor the visitor's experience at our site, showing them content that we think they might be interested in, and displaying the content according to their preferences. financial information (like their account or credit card numbers)&]. Financial information that is collected is used to bill the user for products and services.

Opt-Out

Our site provides users the opportunity to opt-out of receiving communications from us at the point where we request information about the visitor.

Delete/Deactivate

This site gives users the following options for removing their information from our database to not receive future communications or to no longer receive our service.

Policy Suggestion

Desktop Piracy

Suggested Policy: To comply with laws governing software protection from piracy employees must not:

- Make copies of any software unless explicitly authorized.
- Exchange, trade or transfer copies of any software to others in cyberspace.
- Download copies of software that normally would have to be purchased.
- Purchase any software from the Internet without prior approval

If you encounter pirated software or suspect software may have been pirated, notify the system administrator immediately and distance yourself from the real or suspected illegal activity.

Premise: Expect different people to have different standards. They are not better, not worse - simply different.

Principle: The principle of present choices states that current decisions tend to limit future action. This means that most important decisions affect two timeframes. The short-term result may be a benefit but the long-term result can be either a benefit or, as often happens, a consequence.

Do you agree or disagree with the suggested policy?

WHAT IS CLAIMED IS:

1. A method for maintaining policy compliance on a computer network,
comprising the steps of:
 - electronically monitoring network user compliance with a network security
5 policy stored in a database;
 - electronically evaluating network security policy compliance based on the
network user compliance; and
 - electronically undertaking a network policy compliance action in response to
the network security policy compliance.
- 10 2. The method of claim 1, wherein the evaluating step comprises the
steps of:
 - electronically generating a network security policy compliance value based
on monitoring network user compliance for a plurality of network users;
 - 15 electronically comparing the compliance value to a target compliance value,
wherein the target compliance value defines a baseline for network security policy
compliance; and
 - wherein the undertaking step is based on a difference between the
compliance value and the target compliance value.
- 20 3. The method of claim 2, wherein the compliance action is selected
from a group comprising:
 - electronically implementing a different network security policy selected from
network security policies stored in the database;
 - 25 generating policy effectiveness reports; and
 - providing a retraining module to network users.
4. The method of claim 1, further comprising the step of electronically
undertaking a user compliance action in response to monitoring network user
30 compliance.

Policy Feedback

Alvin: No changes

Josh: No changes

William: > I hate getting an approval to download software. I want that section changed.

Facilitator: >Does the group think about downloading software and approvals?

Josh: > Have to company make a list of approved software to download...Would that help you Will? Or do you want the option to download anything?

William: > I could live with a list, as long as I can email the someone to approve of the software I want to have downloaded.

< > MAIN MENU EXIT

Fig. 21

The screenshot shows a window titled "Writing the Policy". On the left side, there is a vertical sidebar with several horizontal lines representing a list or menu. The main content area contains the following text:

Suggested Policy: To comply with laws governing software protection from piracy employees must not:

- Make copies of any software unless explicitly authorized.
- Exchange, trade or transfer copies of any software to others in cyberspace.
- Download copies of software that normally would have to be purchased.
- Purchase any software from the Internet without prior approval

If you encounter pirated software or suspect software may have been pirated, notify the system administrator immediately and distance yourself from the real or suspected illegal activity.

Facilitator: If I am correct, you want this section added to the policy?

Add>>> *All software downloads can be approved by the system administrator. The user needs to email the system administrator to get approval for downloading the software.*

At the bottom right of the window, there are four buttons: a left arrow button, a right arrow button, a "MAIN MENU" button, and an "EXIT" button.

Fig. 22

Vote on a Policy Recommendation

To comply with laws governing software protection from piracy employees must not:

- Make copies of any software unless explicitly authorized.
- Exchange, trade or transfer copies of any software to others in cyberspace.
- Download copies of software that normally would have to be purchased.
- All software downloads can be approved by the system administrator. All network user needs to email the system administrator to get approval before downloading the software.
- Purchase any software from the Internet without prior approval

If you encounter pirated software or suspect software may have been pirated, notify the system administrator immediately and distance yourself from the real or suspected illegal activity.

Fig. 26

The figure shows a graphical user interface for a "Training Feedback Form". The interface is enclosed in a rectangular border. On the left side, there is a vertical column of seven horizontal lines, likely for a progress indicator or a list of items. The main area of the form contains the following text and controls:

Training Feedback Form

Was the subject pertinent to your needs and interests?
No To some extent
Very Much So

Excellent Satisfactory Dissatisfactory

Adequacy of Course Content
Length of Course
Adequacy of Course Materials
Adequacy of Learning Experience
Adequacy of Facilities

If any factor is rated "unsatisfactory", please provide explanation:

What was of least value to you in this seminar?

What was of most value to you in this seminar?

How will you apply this learning back on the job?

Would you recommend this course for other individuals/teams?
Yes No

At the bottom right, there are four buttons: a left arrow button, a right arrow button, a "MAIN MENU" button, and an "EXIT" button.

Fig. 27

Acceptable Use Agreement

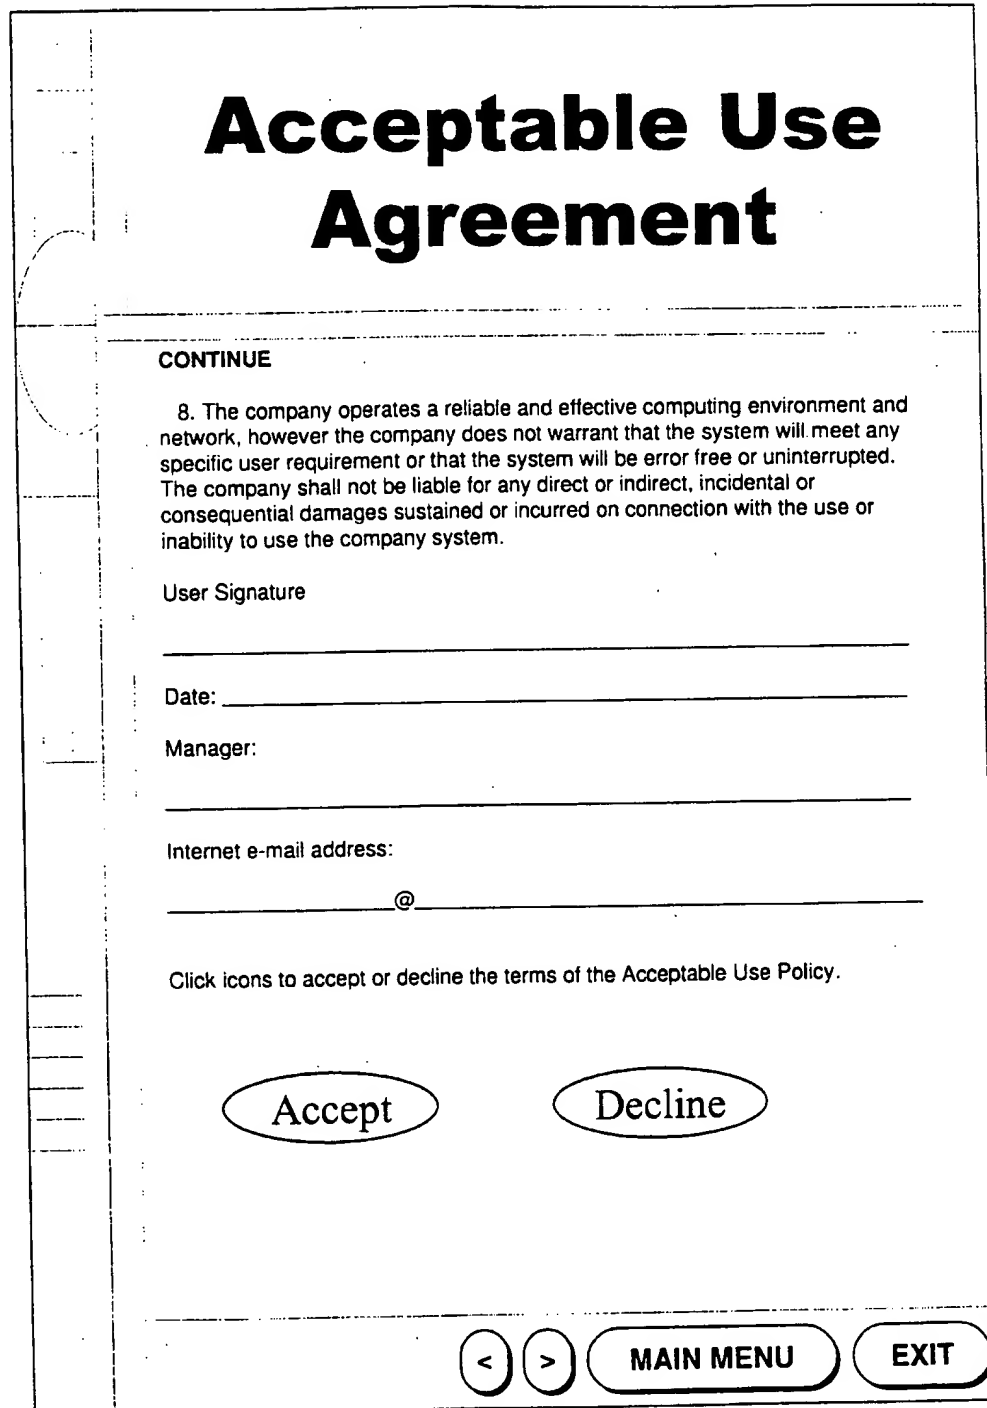

This agreement is between the employee and the user indicated below.

The user agrees to the following:

1. All information stored on the company system is for educational, instructional or administrative purposes. All data stored on the company computer will be suitable for all audiences and shall not violate personnel privacy.
2. Use of the computer system for commercial purposes is prohibited.
3. User accounts which are issued for the purpose of making the organizational (county, program, etc.) Web site will have a designated primary user who is responsible for controlling access to the account. The primary user will not share his/her login ID and password with anyone outside the organizational unit, and will change the password regularly.
4. The company server(s) system is an electronic community. Users are community members and as such must be considerate of other users. Thus, users will attend to their own files and directories and leave others alone. Users shall inform the system administrator, or the Manager if a problem arises with your account or the server(s).
5. Users will be good stewards of the electronic environment and will not waste space, computing power or other user's time.
6. Because this is an educational community, there are many children who have access to materials on the system. Users have a responsibility to ensure a nurturing environment for our children. Consequently, users will neither store nor transmit obscene, abusive or otherwise objectionable material on the system. Such actions will result in prompt termination of system privileges.
7. The company reserves the right to review any material stored on the system and will remove any material which it believes violates and element of this agreement.

< > MAIN MENU EXIT

Fig. 28

Acceptable Use Agreement

CONTINUE

8. The company operates a reliable and effective computing environment and network, however the company does not warrant that the system will meet any specific user requirement or that the system will be error free or uninterrupted. The company shall not be liable for any direct or indirect, incidental or consequential damages sustained or incurred on connection with the use or inability to use the company system.

Fig. 45

The Appeal Process

The Appeal Process grants the user due process, including the opportunity to respond to an alleged violation in writing. The user is given the option to choose an appeal facilitator from the organization.

The chosen facilitator is emailed and granted security and read-only access to a user's file. The facilitator is automatically copied on all appeal process communications. The system records the all communications and written activity.

Internal officers are automatically prompted and sent a notice to schedule the appeal meeting with the new facilitator. The process is reported, stored, and tracked in the policy effectiveness module.

The appeal report is automatically sent to:

- Policy Effectiveness
- The policy officer and the user via email
- The policy officer and the user via snail mail

The user is automatically sent information to inform him of his rights. To access further information, click on the appeal icon
